VALUE Linear Guides for Medium Load

Normal Clearance

Select C-VALUE Products for medium-accuracy positioning, medium/low load, and medium-to-low frequency drive application.

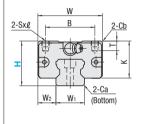

When you comsider using C-VALUE Products, select an appropriate model after comparing the specifications with those of the existing products. BT P.589, P.593

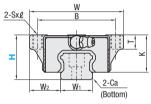

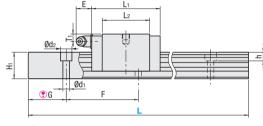

| | Ту | pe | | MMaterial ⊞Hardness | | |
|---|----------------|----------------|----------------|------------------------------|--|--|
| | 1 block | 2 blocks | Dimension | | | |
| | Standard Grade | Standard Grade | Dimension | | | |
| Wide Standard Block Block Tapped Hole | C-SVR | C-SV2R | Selectable | | | |
| | C-SVRL | C-SV2RL | Configurable | Rails / Blocks: Carbon Steel | | |
| | C-SVWT | C-SV2WT | Selectable | 58HRC~62HRC | | |
| | C-SVWTL | C-SV2WTL | Configurable 😲 | | | |

Heat Resistant Temperature: -20 ~ 80°C

- To L Dimension Configurable Type, any L dim, on the Price List is not available. C-SVRL24-170 (Configurable): (
- C-SVRL24-160 (Selectable): X----Place order for C-SVR24-160 (Selectable)

Por L Configurable Type, G dimensions differ from those shown in the table below. For details, see P.553.

- Running parallelism is the value measured after the rail is mounted, (if, not the value measured even use raise resource) with a variety.
 The accuracy of Linear Guides is guaranteed after mounting the rail (after fastening screws on the rail and pushing it onto the datum plane).
 Minor bending of the rail will be adjusted after being mounted and will not affect the performance. Running parallelism is the value measured after the rail is mounted. (it is not the value measured before the rails are fastened with screws.

- Others

 -Filled with Lithium soap based grease (Alvania Grease S2 by Showa Shell Sekiyu K.K).

 -Grease Fittings: Straight Type for H24 and Angled Type for H28 and H33.

 -Grease Fitting is screw-in type, and thus, can be repositioned.

 -For installation and maintenance of Linear Guides, see FF P.551.

Both ends of the rail are evenly cut for L Dimension Configurable Type. G dim. resulting from this cutting process will become other than indicated on the above table. For details about how to calculate the applicable G dim., see 🕦 P553.

kaf=N×0.10972
